Inline and Internal CSS Example:

```html
<!DOCTYPE html>

<html>
    <head>
        <title>Example</title>
        <!--Internal CSS-->
        <style>
            /*style a particular type of tag*/
            h1{
                font-family:monospace;
                font-size: large;
                font-weight: 1000;
                font-style: italic;
            }
            /*add style to a class*/
            .example_class{
                color: blueviolet;
            }
            .sample{
                background-color: aquamarine;
            }
            /*add style to a particular element (using id)*/
            #first_heading{
                align-items: center;
            }
        </style>
    </head>
    <body>
        <!--inline CSS takes precedence over internal CSS and internal CSS takes precedence over external CSS-->
        <h1 id="first_heading" class="example_class sample" style="color: brown">This is the heading</h1>
        <h1 id="second_heading" class="example_class">This is 2nd heading</h1>
        <p id="para1" class="sample">This is para</p>
    </body>
</html>
```
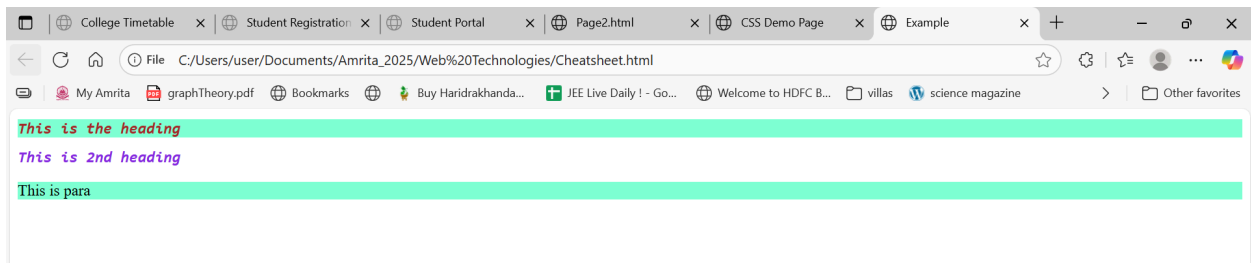

Output:

HTML form example:

```html
<!DOCTYPE html>
<html>
<head>
  <title>Basic Form Example</title>
</head>
<body>

<h2>Student Registration Form</h2>

<form action="#" method="post">
