IPv4 Address

IPv4 is a network layer protocol used to assign a unique address to each device so they can communicate with each other.

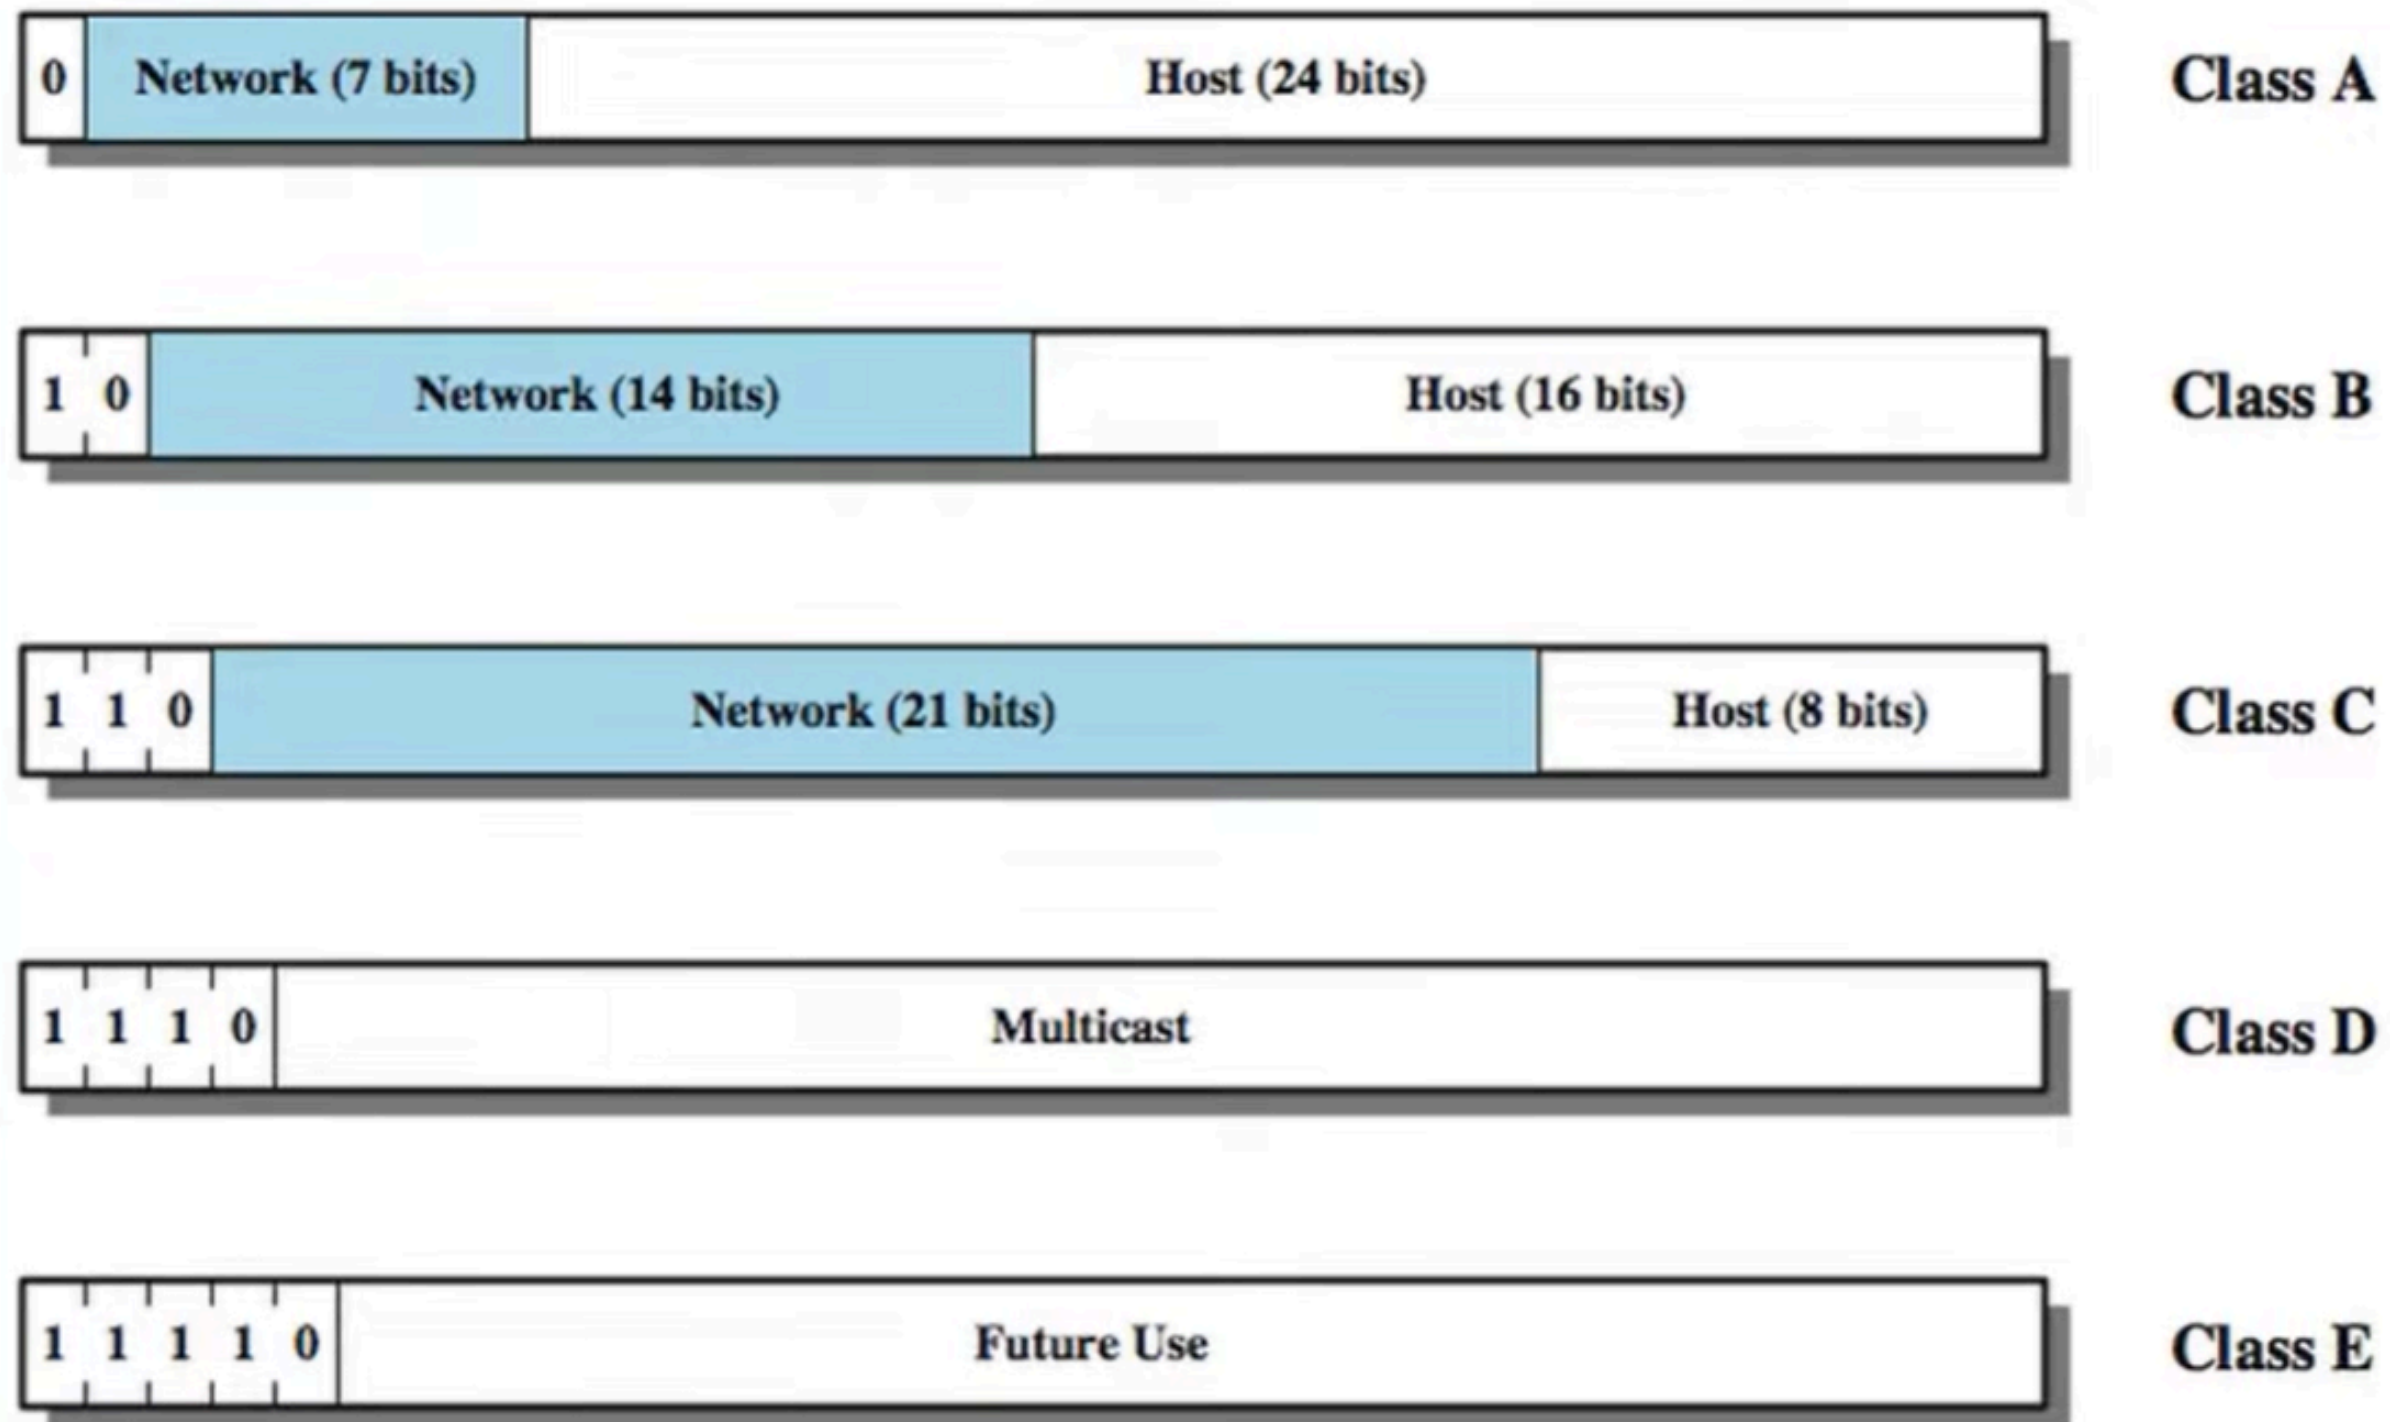

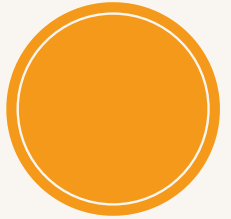

It is a 32-bit address

Written in dotted decimal format

Example: 192.168.1.1

IPv4 Address

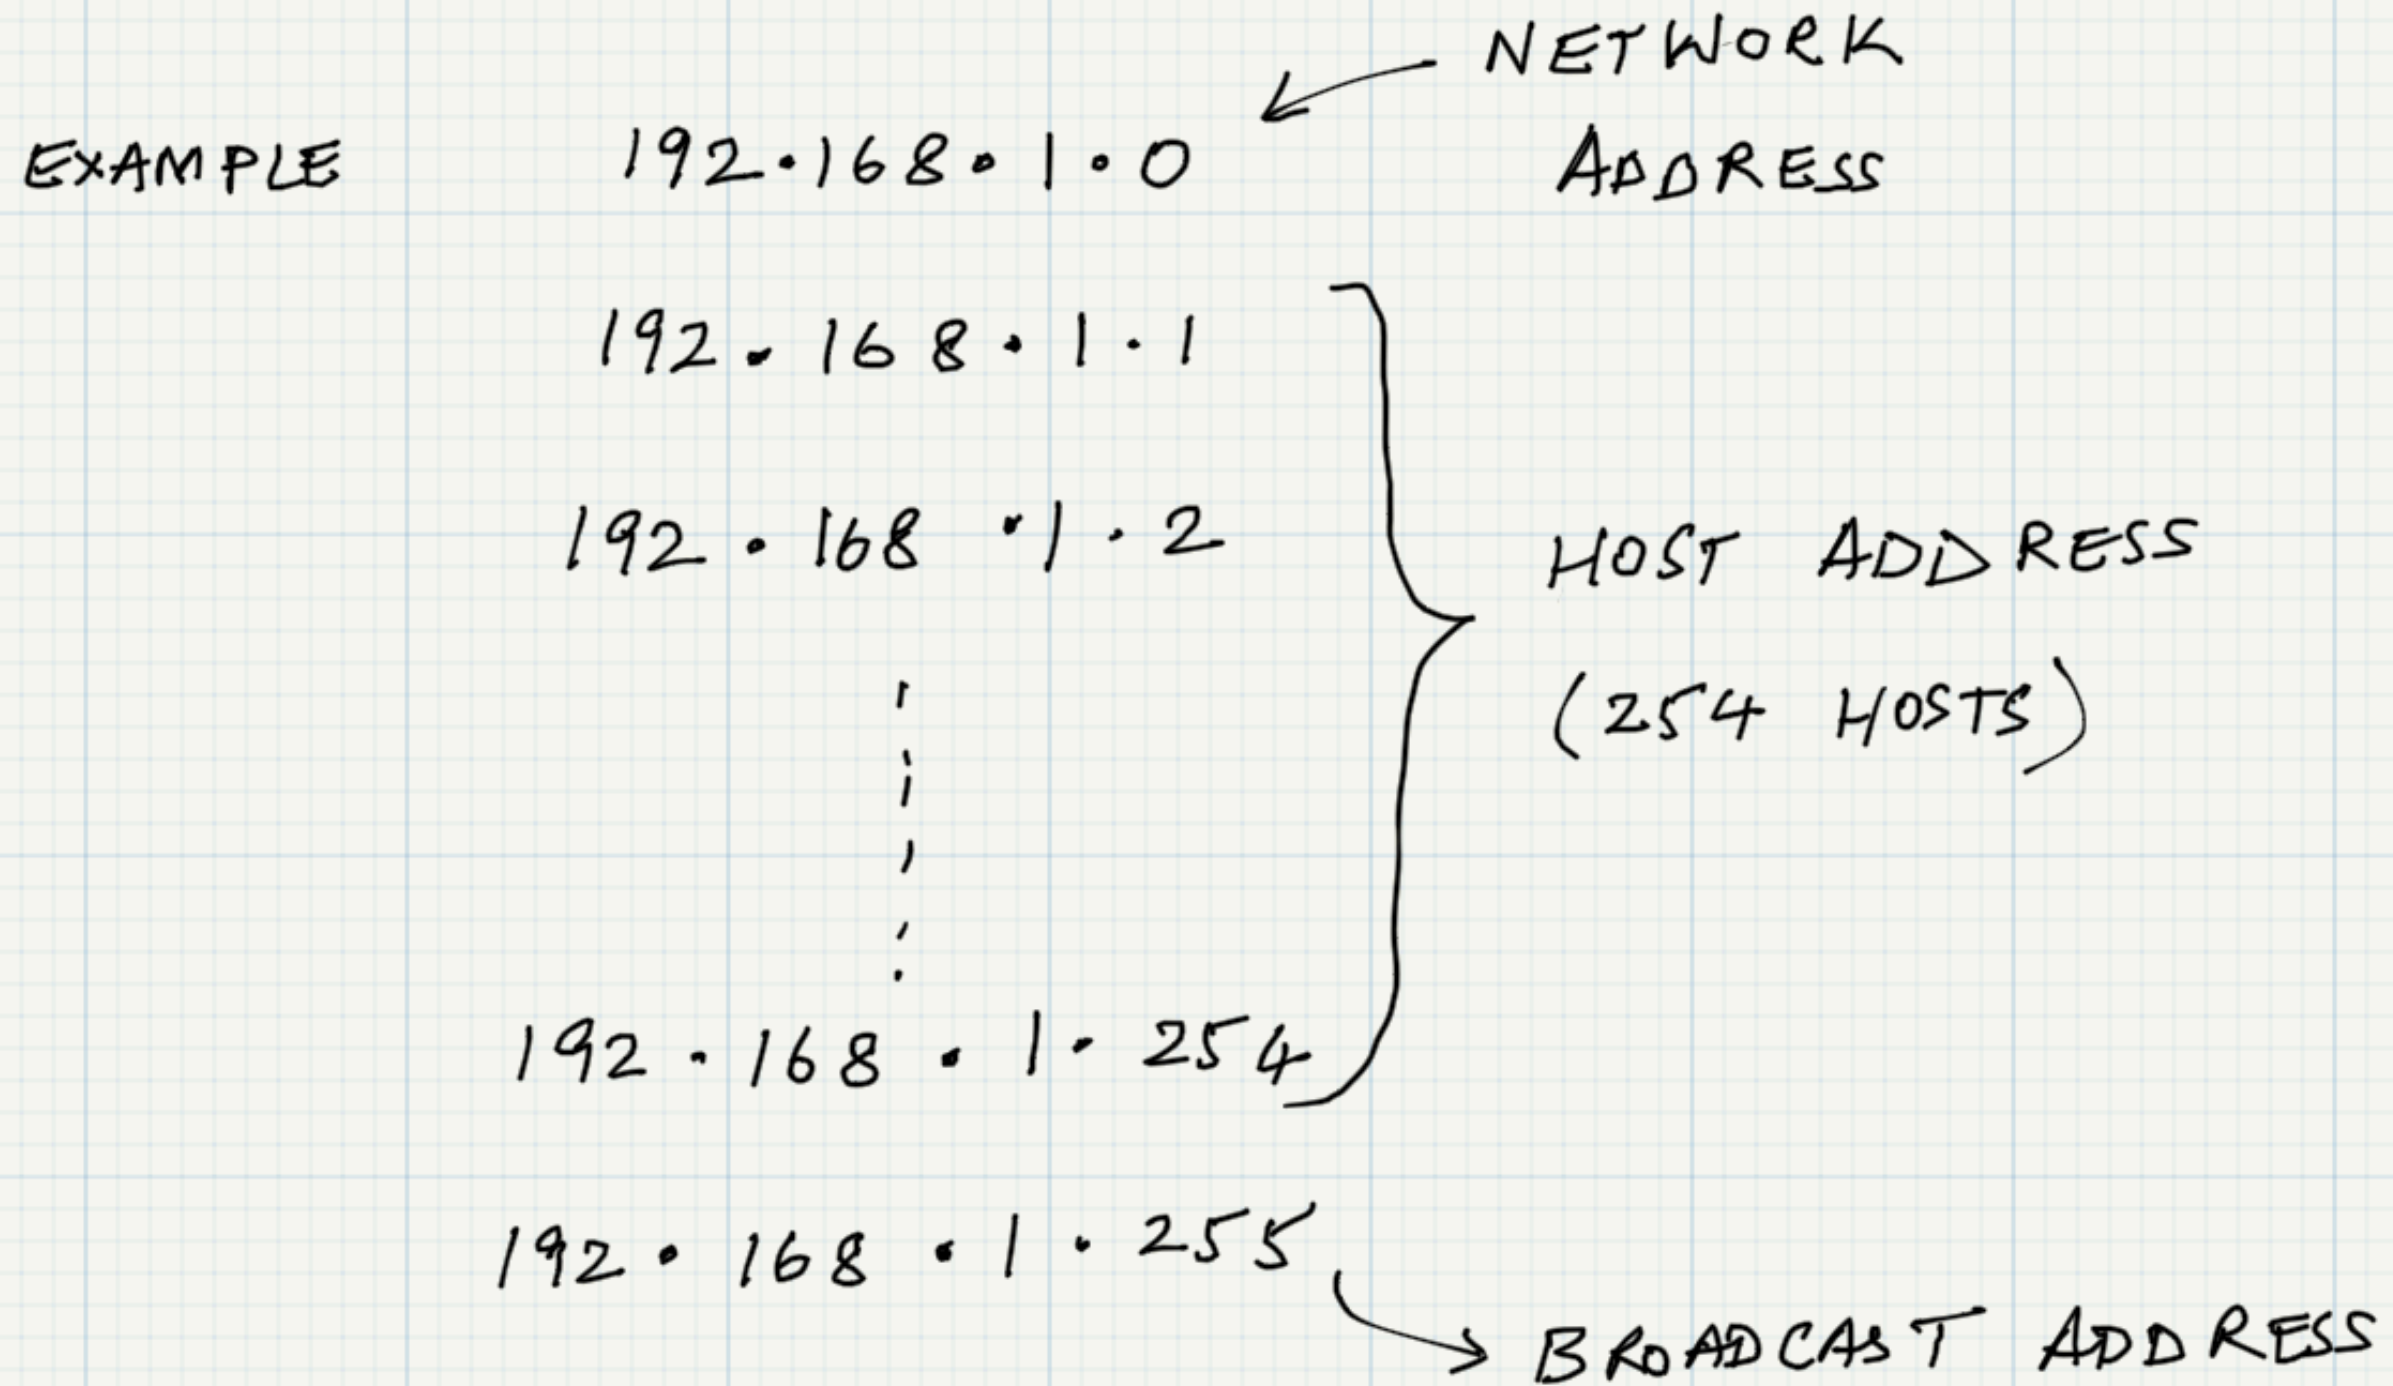

Subnet mask

Subnet mask	
unicast → class A	255.0.0.0
class B	255.255.0.0
class C	255.255.255.0
multicast ← class D	255.255.255.255
reserved. ← class E	255.255.255.255

Network Address range

Subnet

A subnet (subnetwork) is a smaller division of a larger network. It helps organize and manage networks efficiently by splitting them into smaller, manageable parts.
